

## iMTS - Mobile Training Solution Software

### iMTS App

Holds all of the educational material that has been uploaded by the user

### PPT Plug-in

Converts PowerPoint educational material held by the iMTS App into a format that can be used by the iMTS Utility

### iMTS Utility

Creates the menu navigational structure, merges the uploaded PowerPoint files, and formats the educational material

### iMTS Sync

Loads the educational material into the student's iMTS iPhone and iPod touch via the user's wireless network

- iPhone and iPod touch Mobile Training Solution (MTS)
- Display PowerPoint slides with instructor notes, graphics, formatted text, video, audio and PDF files directly on the students' iPhone or iPod touch.
- Synch data with multiple devices simultaneously.
- Broadcast training materials to a large audience with one button.

The iMTS suite of software provides education and training institutions the ability to quickly, efficiently, and safely distribute training materials to large audiences. Using the iMTS software solution with a wireless network, users are now able to sync large volumes of information to multiple devices thereby allowing for a fast, efficient, and safe distribution of lecture material, training material or sales brochures in an easy to use, navigation-friendly format. The iMTS software solution allows educators to display PowerPoint slides with instructor notes, graphics, formatted text, video, audio and PDF files in the iMTS iPhone/iPod Touch Application.

The iMTS -Mobile Training Solution consists of a suite of software that is both PC and Mac compatible. The software suite consists of the following components:

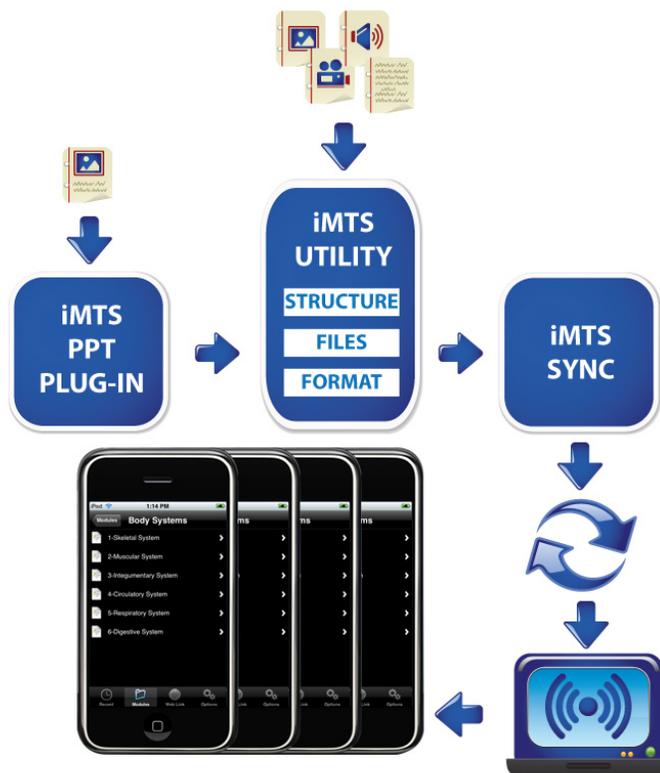

- iMTS iPhone/iPod Touch Application**
- PPT Plug-in**
- iMTS Utility**
- iMTS Sync**

This software package allows even the most novice computer user to build professional mobile training solutions for the classroom and outdoor field instruction.

## How it works

Each component of the software package performs a specific function in creating the Mobile Training Solution. The **iMITS iPhone and iPod touch Application** holds all the educational material that has been uploaded by the user, whereas the **PPT Plug-in** converts PowerPoint educational material held by the iMITS App into a format that can be used by the iMITS Utility. The **iMITS Utility** creates the menu navigation, merges the uploaded PowerPoint files, and formats the educational material. This software is both PC and Mac compatible. The final piece of software is the **iMITS Sync**, which loads the educational material into the students' iMITS iPhone and iPod touch via the user's wireless network.

## other apps by TATE, Incorporated

### SCUBA Hand Signals

The US Navy Diving Hand Signals iPhone/iPod touch application will demonstrate all the hand signals used in diving operations by US Navy and Special Operations Forces.

### HALO Hand Signals
